

Input Image

A teddy bear in front of the mirror

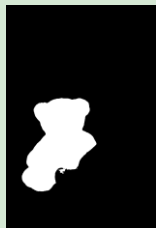

Image Segmentation

Object Mask

Object Segment

Reflection Mask

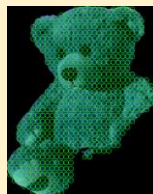

Reflection Segment

Dense Feature Extraction

Object's Dense Point Representation

DINOv2 is used to extract dense semantic features from the two segments

Reflection's Dense Point Representation

Correspondence & Score Computation

Mutual Nearest Neighbor Mapping

Corresponding points between Object and Reflection segments are identified using a Mutual Nearest Neighbor approach

Geometric Consistency Formulation

Final score is computed by measuring the spatial clustering of intersection points around the effective vanishing point

Correspondence Visualization
